# How to Solve a Train Tracks Puzzle

Lay one unbroken line of track from START on the left side of the grid to END at the bottom.

The track moves from square to square, going straight or turning a corner. It never crosses itself and never splits.

The number beside each row, and above each column, tells you how many squares in that line have track in them. A few squares already show their track. Those pieces stay exactly as drawn.

Start with the squares you can be sure about. A row with a 0 has no track at all. A line whose number equals its length is full. When a piece is drawn, follow it to the next square. Cross out squares you know are empty, and pencil in the track as you go.

Every puzzle has exactly one answer and can be solved by logic alone. The answers are on the last pages.

# Whistle Stop
